

**Germicidal UVC Light reacts with nucleic acid killing COVID-19 and other microorganisms.
Formed dimers of cytosine (C-C), thymine (T-T), and uracil (U-U) distort the DNA/RNA stopping its replication.**

**Yeast, mold, spores, fungi,
and bacteria all contain
DNA and RNA.**

UVC
→
275nm

**UVC dimer formation
of C-C and T-T in DNA.**

**Viruses, like COVID-19
only contain RNA.**

UVC
→
275nm

**UVC dimer formation
